

A web-based system built to help factories and industrial companies **manage maintenance tasks, equipment, resources, and employees** efficiently. It simplifies work orders, preventive maintenance, and overall operations from one unified dashboard.

Key Features:

- **Work Orders:** Create, assign, and track tasks with calendar/column/table views.
 - **Preventive Maintenance:** Schedule and automate equipment maintenance.
 - **Analytics:** View task statistics and performance insights.
 - **Requests:** Users submit maintenance requests; the Admin can approve or reject.
 - **Manage Locations, Machines, Stores, and Employees** from one place.
 - **Notifications:** Instant alerts for new tasks, request approvals and subscription reminders.
-

User Roles:

- **Admin:** Full control over the system and users.
 - **Supervisor:** Manages tasks and store.
 - **Technician:** Executes and updates task statuses.
 - **Requester:** Submits maintenance requests.
 - **Viewer:** View-only access.
 - **Super Admin:** Manages all companies, subscriptions, messages, and custom features.
-

How It Works:

1. Visitor views public pages (Home / About / Contact).
 2. Registers for a **7-day free trial** – becomes Admin.
 3. Explores all dashboard features.
 4. After the trial, the user subscribes:
\$20/month or \$216/year.
-

Additional Capabilities:

- Request **custom system development** tailored to factory needs.
- Optional **Production Module:** Track output, waste, and efficiency.
- Integrate **sensors** to monitor:
 - Energy consumption
 - Machine status (On/Off)
 - Plan energy savings
